

Read the instructions carefully before starting the installation. Check that the product is unbroken before starting the installation.

1. Attach the mirror on the wall with included mounting hooks. Measure the height of the mirror and fasten the hook to the right spot on the wall.

2. Install the included increase piece under the hook so the hook is at the right height and hits the loops behind the mirror.

NOTE! Be careful not to scratch the mirror background coating with the hook.

3. Lift the mirror onto the hooks and make sure that the hooks will certainly hit the loops behind the mirror.

Never wet the back of the mirror and keep it dry. The mirror may oxidize because of moisture.

Care and maintenance instructions

The need to wash the mirror depends a lot on the environment conditions. It is recommended to wash glass surfaces regularly, at least once a year. Good tools are wet washcloth/sponge, soft lint free cloth and unbroken squeegee. Window cleaners can be used for cleaning. Denatured alcohol or acetone can be used for severe stains, however, be careful not to let the substance get into the metal structures or the background of the mirror.

The loop behind the mirror

Never use abrasive or grating substances or tools. Use a soft and clean cloth for cleaning.

To prevent scratching, cleaning equipment must be clean and as soft as possible, always remove loose dirt before abrasive cleaning.
